

System admin feature test checklist

Use one copy per test run. Tick only what you personally verified while logged in as that role.

Tester _____	Date _____	Environment ☐ Local ☐ Live
System admin account _____	New super admin account _____	Result ☐ Pass ☐ Fail ☐ Stopped

You need three kinds of people: (1) system admin, (2) a **new** super admin created today, (3) a normal school admin and a teacher in one school. Live: run **git pull** then **flask db upgrade** from `~/mysite/bushrasms` before testing. Old super admins already have schools 1–10, so they will not show the empty case.

1. System admin — sees and assigns everything

- ☐ Banner says System Administrator / Full Access
- ☐ Dashboard, Students, Staff, Exams, and Schools show all schools (including any past id 10)
- ☐ Accounts lists everyone and has a System admin filter
- ☐ Make super on a spare teacher (not a class teacher you still need)
- ☐ That new super sees no school until schools are ticked
- ☐ Tick two schools only → Save schools
- ☐ Untick all → Save schools → they see nothing again
- ☐ Tick one school back → that school appears
- ☐ You still see Make super / Remove super; a super admin does not

2. New super admin — assigned schools only

Log in as the new super admin (private window if needed).

- ☐ Banner says Super Administrator / Assigned Schools (not Full Access)
- ☐ Dashboard and school dropdowns show only the ticked school(s)
- ☐ Students, Staff, and Exams show only those schools
- ☐ Cannot open another school by URL or by picking a hidden school's student/exam
- ☐ Accounts shows only people from assigned schools
- ☐ No Make super button
- ☐ Can Make admin / Remove admin on a teacher in an assigned school
- ☐ Cannot Make admin on someone in a school they do not have
- ☐ They do not appear in teacher or class-teacher pickers on Class Setup
- ☐ My class is hidden
- ☐ Password reset works in assigned schools only; not for other schools or the system admin

3. Empty super admin — sees nothing

Use a second new super, or untick all schools on the first one.

- ☐ Empty dashboard / empty school lists
- ☐ Students, Staff, Exams have no schools to pick

- ☐ Accounts is empty or has no one they can manage
- ☐ Assign one school → that school lights up

4. School admin and teacher — no regression

School admin

- ☐ Still only their own school
- ☐ No Schools / Accounts in the sidebar
- ☐ Students, staff, exams, marks, report cards as usual

Teacher

- ☐ Marks entry and their classes as usual
- ☐ Not sent to a blank super-admin dashboard

5. Leak and teardown checks

- ☐ Super admin: change branch_id in the address bar to a school they do not have → blocked, empty, or redirect — not that school's data
- ☐ Super admin cannot delete a school or delete a subject (system admin only)
- ☐ After Remove super they are a school admin again and only see their home school

Do not test Make super first on a real class teacher you still need. Promoting to super admin clears their lessons and class-teacher assignments. Use a spare account.

Pass when

- ☐ System admin sees all schools
- ☐ New super sees only ticked schools; no ticks → nothing
- ☐ Super can make admins, cannot make supers, cannot teach
- ☐ School admin and teacher still look like yesterday

If any leak shows another school's students, marks, or staff: stop. Write the URL and who was logged in.

Notes / failures
